Project Name	Malaria Detection Using Deep Learning
Maximum Marks	2 Marks

Customer Problem Statement:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	I am a laboratory technician or doctor working in a clinic	I'm trying to diagnose malaria from blood smear samples	But the manual microscopic examination process is slow and requires expert analysis	Because there are many samples and limited trained pathologists	Which makes me feel stressed and worried about delayed diagnosis
PS-2	I am a healthcare worker in a rural clinic	I'm trying to detect malaria infection early in patients	But there is a lack of advanced diagnostic tools and trained professionals	Because rural healthcare centers often have limited medical resources	Which makes me feel concerned about inaccurate or delayed treatment
PS-3	I am a medical researcher	I'm trying to analyze large numbers of blood smear images	But manual classification is time-consuming and prone to human error	Because thousands of images need to be examined carefully	Which makes me feel inefficient and limits research productivity
